Document revision: 20240424-01

Fixture software v. 1.1.3

## Document revisions

<b>Revision number</b>	<b>Notes</b>	<b>Date released</b>
20240424-01	Corrected mistake in DMX channel numbering, pages 41 and 42 (channel numbering jumped from 13 to 15 on page 41).	April 2024
20240207-01	Added pan/tilt disable to DMX Control/Settings channel (correction). Covers firmware v. 1.1.3	February 2024
20230918-01	Minor corrections to document.	September 2023
20230620-01	Added DMX Mode 6. Covers firmware v. 1.1.3.	June 2023
20220720-01	Clearer presentation of channels in 'DMX control modes overview' section (made 16-bit color mix channels clearer, added column with sub module / control group numbering). Minor improvements to wording. Covers firmware v. 1.0.0	July 2022
20220506-01	First impression X5 DMX Index available Covers firmware v. 1.0.0.	May 2022

## 1. Main Fixture and Subfixture

Some control modes divide the fixture into two layers: a Main Fixture (or Main Module) and a Subfixture (or Sub Module). Professional controllers will handle this setup in a smart multi-fixture profile.

If Subfixture Mode is set to **Normal** (the default setting), the Subfixture channels are subordinate to the Main Fixture. This means that the intensity and shutter control channels of the Main Fixture act as global intensity and global shutter. However, if the Subfixture Mode is set to **Independent**, all the control channels of the Subfixture are completely independent of the Main Fixture, and the Subfixture acts as an independent fixture.

## 2. Pixel layout

The X5 fixture's standard pixel positions are as shown below:

The drawing above shows the standard pixel layout with the fixture standing on the ground, pan at 50% (home position) and tilt at 50% (front).

Note that pixel rotation, x-axis pixel mirror and y-axis pixel mirror options are available via DMX on the Control / Settings channel and using the menus in the fixture's control panel.

### 3. DMX control modes overview

The impression X5 offers the following DMX control modes.

DMX channels from 1 to 11 have the same functionality in all the DMX control modes.

#### DMX Mode 1: Basic

24 DMX Channels

**Basic** DMX Mode gives control of the fixture's main functions. Pan, tilt, dimming and the color mixing channels are available with 16-bit control resolution. A shutter channel gives direct change between open and blackout plus a range of intensity effects. Zoom is also available with 8-bit resolution. The Control/Settings channel lets you adjust fixture settings via DMX. Two insert accessory channels allow control of an optional GLP accessory mounted on the head of the fixture.

The color control channels in the Main Module offer color mixing using either (a) RGB, (b) RGLB or (c) x;y color gamut coordinates, depending on which of these three methods is active. You can select the color mixing method via DMX on the Control/Settings channel, via RDM or using the fixture's control panel. Additional color options channels include a color wheel with a wide range of color presets, a CTC channel, magenta/green shift adjustment and a tungsten simulation channel. The CQC channel lets you select if the fixture should give priority to color rendering or output intensity in its white output. This channel also offers an easy way of desaturating colors.

Mode 1 Basic

		Color wheel	20
CTC (Color temperature control)	21		
CQC (Color quality control)	22		
M/G shift	23		
Tungsten simulation	24		

**DMX Mode 2: Normal (default)**

35 DMX channels

**Normal** DMX Mode is split into a **Main Module** and a **Sub Module**.

The **Main Module** gives control of the main functions, as in **Basic** DMX Mode. Pan, tilt, dimming and the color mixing channels have 16-bit control resolution. A shutter channel gives direct change between open and blackout plus a range of intensity effects. Zoom is also available with 8-bit resolution. The Control/Settings channel lets you adjust fixture settings via DMX. Two insert accessory channels allow control of an optional GLP accessory mounted on the head of the fixture.

The color control channels in the Main Module offer color mixing using either (a) RGB, (b) RGLB or (c) x;y color gamut coordinates, depending on which of these three methods is active. You can select the color mixing method via DMX on the Control/Settings channel, via RDM or using the fixture's control panel. Additional color options channels include a color wheel with a wide range of color presets, a CTC channel, magenta/green shift adjustment and a tungsten simulation channel. The CQC channel lets you select if the fixture should give priority to color rendering or output intensity in its white output. This channel also offers an easy way of desaturating colors.

The Mix Priority channel defines how the output of the Main and Sub Modules is merged or overlaid.

**Mode 2  
Normal**

Main module	1:1	Pan	1
			2
		Tilt	3
			4
		Intensity	5
			6
		Shutter	7
		Zoom	8
		Control / Settings	9
		Accessory 1	10
		Accessory 2	11
		[1] RGB – Red	12
		[2] RGLB – Red	13
		[3] x;y – x	13
		[1] RGB – Green	14
		[2] RGLB – Green	15
		[3] x;y – y	15
		[1] RGB – Blue	16
		[2] RGLB – Blue	17
		[3] x;y – not used	17
		[1] RGB – not used	18
		[2] RGLB – Lime	19
		[3] x;y – not used	19
		Color wheel	20
		CTC (Color temperature control)	21
CQC (Color quality control)	22		
M/G shift	23		
Tungsten simulation	24		
Mix priority	25		

Sub module	1:2	Intensity Layer 2	26
			27
		Shutter Layer 2	28
		Pattern selection Layer 2	29
		Pattern step / speed Layer 2	30
		Pattern step crossfading Layer 2	31
		Pattern transition Layer 2	32
		Red, pixels 1-19	33
		Green, pixels 1-19	34
		Blue, pixels 1-19	35

The **Sub Module** forms a second layer. The Sub Module channels provide intensity and shutter control, a powerful static and dynamic pattern effects engine with step crossfading and pattern transition options, plus RGB color control of all 19 pixels as one group.

### DMX Mode 3: Segments

41 DMX channels

**Segments** DMX Mode is split into a Main Module and a Sub Module.

The **Main Module** gives control of the main functions, as in **Basic** DMX Mode. Pan, tilt, dimming and the color mixing channels have 16-bit control resolution. A shutter channel gives direct change between open and blackout plus a range of intensity effects. Zoom is also available with 8-bit resolution. The Control/Settings channel lets you adjust fixture settings via DMX. Two insert accessory channels allow control of an optional GLP accessory mounted on the head of the fixture.

The color control channels in the Main Module offer color mixing using either (a) RGB, (b) RGBL or (c) x;y color gamut coordinates, depending on which of these three methods is active. You can select the color mixing method via DMX on the Control/Settings channel, via RDM or using the fixture's control panel. Additional color options channels include a color wheel with a wide range of color presets, a CTC channel, magenta/green shift adjustment and a tungsten simulation channel. The CQC channel lets you select if the fixture should give priority to color rendering or output intensity in its white output. This channel also offers an easy way of desaturating colors.

The Mix Priority channel defines how the output of the Main and Sub Modules is merged or overlaid.

The **Sub Module** forms a second layer. The Sub Module channels provide intensity and shutter control, a powerful static and dynamic pattern

		Green, segment 08-19	40
		Blue, segment 08-19	41

effects engine with step crossfading and pattern transition options, plus RGB color control of three pixel groups as segments.

**DMX Mode 4: Multipix advanced**

89 DMX Channels

**Multipix Advanced** DMX Mode is split into a Main Module and a Sub Module.

The **Main Module** gives control of the main functions, as in **Basic** DMX Mode. Pan, tilt, dimming and the color mixing channels have 16-bit control resolution. A shutter channel gives direct change between open and blackout plus a range of intensity effects. Zoom is also available with 8-bit resolution. The Control/Settings channel lets you adjust fixture settings via DMX. Two insert accessory channels allow control of an optional GLP accessory mounted on the head of the fixture.

The color control channels in the Main Module offer color mixing using either (a) RGB, (b) RGBL or (c) x;y color gamut coordinates, depending on which of these three methods is active. You can select the color mixing method via DMX on the Control/Settings channel, via RDM or using the fixture's control panel. Additional color options channels include a color wheel with a wide range of color presets, a CTC channel, magenta/green shift adjustment and a tungsten simulation channel. The CQC channel lets you select if the fixture should give priority to color rendering or output intensity in its white output. This channel also offers an easy way of desaturating colors.

The Mix Priority channel defines how the output of the Main and Sub Modules is merged or overlaid.

The **Sub Module** forms a second layer. The Sub Module channels provide intensity and shutter control, a powerful static and dynamic pattern

effects engine with step crossfading and pattern transition options, plus RGB color control of each individual pixel.

### DMX Mode 5: Multipix compressed RGB

70 DMX Channels

**MultiPix compressed RGB** DMX Mode gives control of the main functions, as in **Basic** DMX Mode, plus RGB color control of each individual pixel with Lime added automatically.

Pan, tilt and dimming have 16-bit control resolution. A shutter channel gives direct change between open and blackout plus a range of intensity effects. Zoom is also available with 8-bit resolution. The Control/Settings channel lets you adjust fixture settings via DMX. Two insert accessory channels allow control of an optional GLP accessory mounted on the head of the fixture.

Color mixing is carried out on the individual pixel control channels.

The CTC Channel lets you temporarily change from the fixed white point to any other color temperature. The CQC channel lets you select whether the fixture should give priority to color rendering or output intensity in its white output. This channel also offers an easy way of desaturating colors.

**DMX Mode 6: Multipix compressed RGBL**

89 DMX Channels

**MultiPix compressed RGBL** DMX Mode gives control of the main functions, as in **Basic** DMX Mode, plus RGBL color control of each individual pixel.

Pan, tilt and dimming have 16-bit control resolution. A shutter channel gives direct change between open and blackout plus a range of intensity effects. Zoom is also available with 8-bit resolution. The Control/Settings channel lets you adjust fixture settings via DMX. Two insert accessory channels allow control of an optional GLP accessory mounted on the head of the fixture.

Color mixing is carried out on the individual pixel control channels.

The CTC Channel lets you temporarily change from the fixed white point to any other color temperature. The CQC channel lets you select whether the fixture should give priority to color rendering or output intensity in its white output. This channel also offers an easy way of desaturating colors.

#### 4. DMX control channel layout

In the following DMX channel layout tables:

- Default settings are indicated with **bold type**.
- Where commands are followed by (3s hold) you must send that value continuously for 3 seconds (or other duration if indicated in the table) to apply the command.
- Percentage equivalents are rounded up or down to the nearest 0.1%

**DMX Mode 1: Basic****24 DMX Channels**

To reduce the risk of accidentally changing settings, the commands on the Control / Settings channel must be held for a certain time before they are executed. The above table indicates the number of seconds that you must hold a command.

## 5. Key to conversion of x and y coordinates

The following formulas are used when converting DMX values to x/y coordinates on the RGB and RGBL color mixing channels:

### **8-bit**

$$\text{DMX } x = \frac{x \text{ co-ordinate} \times 255}{0.8}$$

$$\text{DMX } y = \frac{y \text{ co-ordinate} \times 255}{0.8}$$

### **16-bit**

$$\text{DMX } x = \frac{x \text{ co-ordinate} \times 65535}{0.8}$$

$$\text{DMX } y = \frac{y \text{ co-ordinate} \times 65535}{0.8}$$

## 6. Color wheel specifications

The following table gives the color gamut co-ordinates of the color presets available on the color wheel effect.

Filter 004, Medium Bastard Amber	0.37;0.335
Filter 019, Fire	0.664;0.31
Filter 025, Sunset Red	0.566;0.359
